

AHTNA

Environmental Construction Services

Adak, Alaska

U.S. Navy (Naval Air Facility)

Project Description

Tetra Tech awarded Ahtna a subcontract to provide labor and equipment support for an environmental remediation project located at multiple sites at a former Naval Air Facility in Adak, Alaska. Adak is an island located approximately 1,300 miles southwest of Anchorage in the Aleutian Island chain. Since the equipment necessary to perform the work were not available locally, Ahtna chartered barges to mobilize and demobilize the equipment. Ahtna staff mobilized to Adak via aircraft for the six month project. During that time, Ahtna staff installed recovery trenches, corrected drainage at a landfill, removed Rommel stakes for reuse, repaired drainage swales, and performed other tasks such as installing signage.

Adak, AK. *Because of the remote project location, Ahtna staff mobilized via aircraft.*
