

AHTNA

Engineering and Construction Services *Western Service Area*

Federal Aviation Administration

Project Description

Ahtna is selected by the Federal Aviation Administration (FAA) to perform engineering and construction services within the FAA's Western Service Area. Task orders to date include infrastructure refurbishment, fuel storage life cycle management, environmental investigation/remediation, environmental and OSHA compliance, building demolition and site restoration, engine generator replacement, lightning protection, grounding and bonding, Air Traffic Control Tower (ATCT) structural evaluations, chiller/cooling tower upgrades, and security fencing work throughout the West coast, Alaska, and Hawaii. Most recently, Ahtna was tasked with providing engineering, site survey, site preparation, subcontracting, drafting, documentation, and technical support for installation of Airport Surface Detection Equipment–Model X systems.

Billings Logan International Airport, Billings, MT. Air traffic control tower roof replacement.

Biorka Island, AK. Doppler radar facility HVAC replacement.
